HIGH SCHOOL FOR GRAPHIC COMMUNICATION ARTS, NEW YORK CITY

## **CURTAIN WALL UPDATE**

Originally built as the New York School of Printing, the converted High School for Graphic Communication Arts called upon **Kalwall** 30 years ago to cover a wing of ribbed glass block with a

translucent curtain wall system. Fast-forward three decades and Kalwall again updated the curtain wall. The new curtain wall is much more energy efficient and insulating; it brings balanced, glare-free daylight into the space.

## **LOW-E GLAZING RETROFIT**

As part of a \$1.6 million DOE-funded project, **J.E. Berkowitz**, Quanta Technologies and the NAHB Research Center teamed up to  $demonstrate the \ extent \ to \ which \ a \ low-e \ glazing \ retrofit \ can \ improve \ energy \ efficiency \ in \ older \ buildings. \ The \ subject, \ a \ 12-story$  $building in downtown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units in the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass units of the building \emph{'s} existing single-pane windown Philadelphia, received new triple-glazed insulating glass of the building of$  $dows, compliments of Renovate \ by \ Berkowitz, an \ on-site \ window \ retrofitting \ system. \ While \ NAHB \ is \ in \ the \ process \ of \ tracking$  $indoor \, conditions \, and \, energy \, consumption \, in \, retrofitted \, and \, control \, rooms \, throughout \, the \, facility, \, so \, far \, the \, building's \, east-facing$  $perimeter\ offices\ showed\ a\ 40\%\ reduction\ in\ energy\ use,\ and\ the\ north-facing\ perimeter\ offices\ has\ delivered\ more\ than\ a\ 60\%\ reduction\ in\ energy\ use,\ and\ the\ north-facing\ perimeter\ offices\ has\ delivered\ more\ than\ a\ 60\%\ reduction\ in\ energy\ use,\ and\ the\ north-facing\ perimeter\ offices\ has\ delivered\ more\ than\ a\ 60\%\ reduction\ in\ energy\ use,\ and\ the\ north-facing\ perimeter\ offices\ has\ delivered\ more\ than\ a\ 60\%\ reduction\ in\ energy\ use,\ and\ the\ north-facing\ perimeter\ offices\ has\ delivered\ more\ than\ a\ 60\%\ reduction\ in\ energy\ use,\ and\ the\ north-facing\ perimeter\ offices\ has\ delivered\ more\ than\ a\ 60\%\ red\ north-facing\ perimeter\ offices\ has\ delivered\ more\ than\ a\ 60\%\ red\ north-facing\ perimeter\ north-facing\ perimeter\$ reduction. <u>www.jeberkowitz.com</u> or **Circle 497**
